## Abundant, Accurate, Actionable

Corporate Emissions

Envai can provide you with regularly updated emissions data for over 850 publicly traded companies, with up to 7 years of history across 42 countries and 130 industries across 14 sectors *in your choice* of file format, units, and preferred ESG accounting standard.

Our database is rapidly growing, with new companies added every quarter.

Carbon Emissions

Using our proprietary AI engine in hybrid with human supervision, we are able to efficiently ingest all relevant published documents, extract key information, process and standardize the data, and output plug & play metrics.

| Flexible	Unlimited Access	User Friendly
Documentation translated into the specific data you need, in the format you want	Robust API to retrieve data for any and all tickers in database anytime or on regular schedule.	Easy to understand, customize and update selections.

EnvAI Solutions Inc.

Input
- Environmental report in various frameworks
- Annual reports
- Third party verification reports

**Automated Layout Extraction**

Process Content

Output

Delivered through API or direct file transfers in any format and reporting standard

EnvAI uses leading methodologies for data collection, emissions accounting, and conversion between frameworks

Real-time learning with minimal training data

Cutting edge natural language processing AI

Consistent with TCFD, SASB, GRI, and other frameworks

Climate Pathway API

EnvAI

Data has been directly used for further climate modelling on an individual company basis using the EnvAI Climate Pathway. Specific sector-based case studies and results were consistent with general findings of the Climate Action Tracker (CAT).
